Tokyo | saisiddharth7369@gmail.com | linkedin.com/in/yeggadi-sai-siddharth/ | github.com/saisiddharthyeggadi

SUMMARY

Tokyo-based, **bilingual** (English/Japanese) **AI Engineer** with hands-on experience architecting and deploying production **Agentic RAG** on Google Cloud. Built a multi-agent RAG chatbot using **Google ADK**'s agent orchestration and **MCP**-based tool-calling, backed by a **Vertex AI** retrieval pipeline spanning chunking, embedding, and enterprise-scale vector search, engineered specifically to eliminate hallucinations in customer-facing deployments. **IIT Hyderabad** graduate, with hands-on development experience. Trained in Japanese business communication for direct client engagement, waiting for **JLPT N2** results.

EXPERIENCE

Systems Development Engineer

Tomato CO., Ltd. | *GitHub Repo*

Tokyo, Japan
Nov 2025 – present

- Designed and deployed a customer-facing **multi-agent RAG** solution over an internal knowledge base using **Google ADK**, **MCP-based** tool integrations, **Vertex AI embeddings**, and **Vector retrieval**.
- Engineered the end-to-end retrieval **workflow**, including **document chunking**, **embedding generation**, **semantic search**, **agent orchestration**, **tool invocation**, and structured response validation.
- Partnered directly with Japanese-speaking customer stakeholders to gather requirements, understand operational workflows, translate business needs into technical designs, and **align the solution with customer expectations**.
- Developed **bilingual** English and Japanese technical documentation and independently supported customer discussions, design reviews, and solution walkthrough.
- Delivered an **Asset-Management** application cutting manual register-tracking effort by **80%** using **Angular** framework, **Tailwind CSS** and **QR-code based tracking**.
- Created **reusable** application components and implementation documentation to support maintenance and future delivery.
- Technologies: Python, Google ADK, Streamlit, Google Cloud (Vertex AI), Angular, TypeScript, Tailwind CSS, Google Sheets.

Generative AI Engineering Intern

Kore.ai

Hyderabad, India
July 2024 – Aug 2024

- Engineered custom chat templates and fine-tuned a language model for a **test-dataset generation pipeline** used to validate function execution in an internal Python development environment.
- Automated significant portions of the test-generation workflow, reducing testing time by **87%** compared with the existing process.
- Designed a structured evaluation matrix scoring multiple deployed LLMs on intelligence, utility, and operational performance, **directly informing the team's model-selection** and enterprise deployment strategy.
- Developed hands-on expertise in enterprise LLM production workflows, **inference optimization**, **token management**, **fine-tuning**, **structured output generation**, and **model evaluation** for scalable industry deployment.

Computer Vision / ML Intern

Ojas Innovation Technologies Pvt.Ltd

Hyderabad, India
May 2024 – July 2024

- Built a face-attribute recognition model using custom Convolutional Neural Networks (CNN), achieving 95% AUC and 90% binary accuracy across the evaluated image datasets.
- Improved model performance through systematic hyperparameter tuning, learning-rate scheduling, batch-size optimization, and regularization.
- Developed an end-to-end **Computer Vision pipeline** covering image preprocessing, data augmentation, model training, validation, and inference.
- Technologies: Python, TensorFlow, CNNs

PROJECTS

Recipe Dictionary with Shopping Cart [GitHub]

- Extended an existing Angular recipe application by designing and implementing expense-tracking, shopping-cart, calorie-logging, weekly-budget, and nutrition-analysis functionality.
- Reduced monthly food expenses by 40% and tracked daily caloric intake by algorithmically managing ingredient budgets and nutrition goals.
- Added the functionality to an existing open-source codebase of beattris, demonstrating the ability to understand an unfamiliar application, extend its architecture, and integrate new features without rebuilding the system from scratch.
- Integrated Firebase for application data storage and synchronisation, and used Tailwind CSS to create responsive user interfaces.
- Technologies: Angular, TypeScript, Firebase, Tailwind CSS

SKILLS

Programming: Python • TypeScript • JavaScript • C++ • C

AI and LLM Engineering: RAG • Agent Orchestration • Prompt Engineering • LLM Evaluation • Embeddings • Vector Retrieval • Fine-Tuning

AI/LLM Frameworks: MCP • Google ADK • Vertex AI • Gemini API • Hugging Face Transformers • PyTorch • TensorFlow

Software Engineering: Node.js • React.js • Express.js • Angular • FastAPI • Astro.js • Firebase • HTML • CSS

Cloud & Data: Google Cloud Platform (GCP) • Firebase • MongoDB • Vector Databases

EDUCATION & CERTIFICATIONS

IIT Hyderabad, B.Tech

2021 – 2025

GPA: 7.72 / 10.0

ACHIEVEMENTS

- Solved **475+** **algorithmic problems** on [LeetCode](https://leetcode.com/), earning a **365-days consistency** badge and 15 additional badges.
- Completed the **JLPT N2** examination after **7 months** of Japanese study from beginner level; result pending.
