

# YEGGADI SAI SIDDHARTH

Tokyo, Japan | saisiddharth7369@gmail.com | 070-9198-8702 | linkedin/sai-siddharth | github/sai-siddharth

## Summary

Tokyo-Based Bilingual(English/Japanese) AI Engineer and IIT Hyderabad graduate with a very strong programming and algorithmic foundation, highlighted by ranking 2,824 in JEE Advanced. Proven track record optimizing LLM lifecycle at Kore.ai, engineering deep learning CV architectures (CNNs) at Ojas, and building full-stack applications with Node.js and React.js. Locally residing in Tokyo, aiming to clear JLPT N2 July 2026, and deeply passionate about exploring the capabilities and boundaries of modern LLM applications.

## Experience

### Systems Development Engineer

Tomato CO., Ltd.

Tokyo, Japan

Nov 2025 – present

- **Attained professional-level mastery of Japanese business operations**, cultivating the bilingual technical documentation skills and conversational agility required to bridge global tech stacks with local stakeholders.
- Undergoing an intensive engineering localization track, dedicating full-time technical focus toward **adapting core software development principles to native Japanese corporate infrastructure** and delivery standards.
- Conducting independent technical research and architectural upskilling in advanced machine learning frameworks, ensuring immediate readiness for production-grade AI deployment pipelines

### Generative AI Engineering Intern

Kore.ai

Hyderabad, India

Aug 2024 – July 2025

- **Engineered robust prompt frameworks and custom chat templates** to securely restrict the execution of unauthorized functions within an internal Python IDE, establishing rigid system guardrails and ensuring successful environment testing.
- **Architected and executed comprehensive benchmarking matrixes** across multiple foundation models, evaluating inference latencies and response accuracy to directly drive the engineering teams core model-selection strategy.
- **Mastered and applied enterprise-level LLM production** workflows, gaining deep practical expertise in model inference optimization, token management, and fine-tuning methodologies for scalable industry deployment.

### Computer Vision / ML Intern

Ojas Innovation Technologies

Hyderabad, India

May 2023 – July 2024

- **Engineered a high-precision Face Attribute Recognition model** utilizing custom Convolutional Neural Networks (CNNs) in Python, achieving a 95% classification accuracy across diverse image datasets.
- **Executed systematic hyperparameter tuning** (including learning rate scheduling, batch size optimization, and regularization), which significantly reduced training loss and lowered inference latency.
- **Designed end-to-end computer vision pipelines**, implementing advanced preprocessing and data augmentation techniques to ensure high model generalization and robust feature extraction in production environments.

### Full Stack Engineering Intern

Kaustubha Medtech Pvt Ltd

Remote, India

Mar 2024

- **Architected a real-time doctor appointment web application** utilizing a scalable Node.js backend, integrating core features including user authentication protocols, appointment scheduling systems, and a live chat interface.
- **Integrated Firebase for cloud-native data management**, optimizing real-time database synchronizations and state updates to ensure low latency and an enhanced end-user experience

## Projects

### E commerce Website [GitHub]

- Engineered a full-stack e-commerce engine using Node.js and Express.js, optimizing database aggregation pipelines in MongoDB to significantly minimize backend API response times.
- Developed modular API endpoints for complex user actions (browsing, filtering, checkout routing), maintaining a clean separation of concerns and robust data validation layers.
- Integrated third-party data handlers and state engines to ensure real-time inventory updates and a seamless, zero-lag user checkout experience.
- *Stack: Node.js, Express.js, MongoDB, JavaScript, HTML, CSS*

## Skills

**Languages:** C • C++ • Python • TypeScript • JavaScript

**Libraries Frameworks:** Node.js • React.js • express.js • Astro.js • Angular • Firebase • HTML • CSS

**Python Libraries:** Transformers • PyTorch • NumPy • Pandas • OpenCV • Seaborn • TensorFlow • Scikit-learn

**Core CS:** Data Structures & Algorithms • System Design • OOP • DBMS • Agile SDLC

**AI Tools:** Gemini API • Cursor • Claude AI (development productivity)

## Education

IIT Hyderabad, Bachelors of Technology • GPA: 7.72 / 10.0

Nov 2021 – Jul 2025

Relevant Coursework: Programming, Machine Learning, Artificial Intelligence, Data Structures & Algorithms

## Certifications & Achievements

- Google Cyber Security certificate
- 450+ LeetCode problems solved and 365 days badge including 15 other badges.
